

## **Appendix 8: Rejecting a waste container** **(WIVA container, stainless-steel container, dump-bottle, DPTE container)**

This explanation describes why an empty or filled container may be rejected and what subsequent actions should be taken.

### **Rejection by PSP Logistics centre**

An incorrectly presented container will be rejected by PSP for transport if, for example:

- a completely filled label is missing
- the container lid is not properly closed;
- incorrect loading (feeling hearing splashing of liquid);
- the pliersnumber/identification is illegible;
- the identification label on the WIVA container is illegible or missing;
- the lead seals have not been attached properly;
- the exterior is dirty;
- the container weighs more than 23 kg.

Upon rejection of a container by a PSP Logistics centre employee, the container is provided with a white label (see figure 1) stating the reason for rejection. The manager of the lab/production area in question must put corrective measures in place (such as a complete label, application of a new seal, repackaging, clean exterior and so on).

If incorrect delivery occurs again within three months, at the same organisational unit, PSP will inform line management in writing.

### **Rejection by the lab or production employee**

An empty container provided by PSP, can be rejected by the lab or production employee if, for example:

- the WIVA container has expired (the container is older than 5 years after the production date, as stated on the container).
- container is broken
- lid doesn't fit properly on the container
- clamps are missing/broken
- pop-up cap (red cap) is missing on the inside of the stainless-steel lid

Upon rejection of a container by a lab or production employee, the container is provided with a white label (see figure 2) stating the reason for rejection, or the PSP Logistics centre ([logistiekcentrum@poonawallasciencepark.nl](mailto:logistiekcentrum@poonawallasciencepark.nl)) is contacted.

[See appendix 7 Explanation of waste containers](#) (WIVA and stainless-steel container).

**UTRECHT SCIENCE PARK BILTHOVEN (USPB)**

**Afwijzen RVS container of WIVA-vat door Logistiek Centrum PSP**

Datum:

RVS container / WIVA-vat is niet geschikt voor transport, want:

- Volledig ingevuld label ontbreekt
- Deksel is niet afgesloten volgens richtlijn
- Tangnummer / identificatiesticker is onleesbaar of ontbreekt
- Expiratie datum Wiva vat is overschreden (max 5 jr na productiedatum)
- Buitenzijde container is niet schoon
- Zwaarder dan 23 kg
- Maximale vullijn is overschreden
- Vermoeden van onjuiste belading, namelijk: .....
- Anders, namelijk: .....
