

## Marking materials

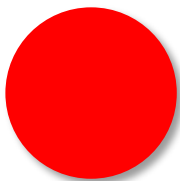

Rooms in which work is carried with or storage takes place of hazardous substances or organisms (chemical, microbiological or radiological/nuclear) are marked with a colour that indicates the level of risk. This is made visible and tactile on the entrance door to the laboratory room with one of the following symbols (Repressief zakboek Veiligheidsregio Utrecht (Fire Service Region of Utrecht Land), interne procedure BRUL: 2-08 BIO-hazard-laboratorium):

Low risk  
Green rectangle measuring 12 by 12 cm and 5 mm thick

Medium risk  
Yellow equilateral triangle measuring 12 cm on each side and 5 mm thick

High risk  
Red circle with a diameter of 12 cm and 5 mm thick

The marking materials are made of incombustible material and have a fire-resistant fixing. The place of fixing to the entrance door of the room is 10 cm above the door handle.
