

Our Vision

To reduce human disease through innovative vaccine technology

Our Mission

To partner with governmental agencies, NGOs and private entities to help to reduce burden of disease

The Management Team of Intravacc declares that, for the proper execution of its mission and vision, it attaches importance to quality, taking care for the environment, people and a sustainable society. This is will be achieved by sticking to subsequent principles:

- Intravacc complies with all applicable laws and regulations, permit requirements, covenants, etc and is constantly monitoring this as part of Intravacc's quality system.
- Intravacc continuously works on quality improvement of products, processes, working environment and operations, including guarantee of GMP and Biosafety, where required by the nature of the tasks.
- Intravacc's guiding principle is prevention. We systematically work on preventing quality problems, reducing environmental impact and risks for employees, visitors and stakeholders.
- Intravacc identifies risks, opportunities and environmental aspects, prioritizes appropriate control measures, communicates about quality and environment to all relevant third parties effectively and realizes improvements. Important conditions are measurability of objectives and results.
- Intravacc will identify which energy savings are feasible in order to reduce its future energy consumption.
- Intravacc has the intention to certify the CO2 reduction management module (Level 1) according NEN-EN-ISO 14001.
- Intravacc operates according to a business management system in which quality- and environmental management are integrated and certified according to NEN-EN-ISO 14001.
- Intravacc has implemented a laboratory Biorisk Management System to control risks associated with handling, storage, disposal of hazardous biological material, unintentional release, unauthorized intentional release, and improves the Biorisk management performance continually.
- Equipment is used according to the best available techniques for performance and (bio)safe working conditions.
- Active contribution to quality and environmental issues is expected from every manager, employee and person concerned. Resources including the level of knowledge for adequately realizing the quality and environmental policy will be provided by the Management Team.
- Good communication is of great importance to be able to take into account wishes and requirements of our stakeholders. If required for the assignment, requirements will be included as an obligation in the quality and environmental management system.
- In view of the future positioning of Intravacc in the public, private and international arena Quality-, Environmental- and Biorisk Management Systems are determined to be of strategic importance. In addition, necessary resources are made available by the Management Team to be able to permanently improve and update these systems.
